PORTLAND
ORIGINAL STONE

La pietra di Portland (estratta sull'isola di Portland, nel Dorset) è un tipo di pietra calcarea che si è formata lentamente negli ultimi 150 milioni di anni circa mentre minuscoli granelli di sedimento crescevano e si compattavano. È molto simile a Bath Stone, ma ha una struttura, una grana e un colore sottilmente unici. Portland Stone è in realtà una famiglia di varianti calcaree strettamente correlate, ciascuna delle quali deve le sue sottili qualità uniche all'età della pietra. Sebbene le diverse varianti abbiano queste qualità distinte, condividono tutte alcune caratteristiche comuni: sono tutti di colore da bianco sporco a grigio chiaro, notevolmente uniformi nel colore ma intervallati con piccoli granelli scuri, o 'granella'.

Utilizzata fin dall'epoca romana, la pietra di Portland è stata un materiale da costruzione particolarmente popolare dove l'effetto architettonico desiderato era di grandiosità. È stato utilizzato in particolare in ambito politico, architettura finanziaria, regale, civile e commemorativa. In effetti un numero impressionante di enormi edifici significativi, in particolare a Londra, furono costruiti con la pietra di Portland in mezza metà del 1700 e gli anni '30. Ad oggi, la pietra Portland rimane una delle pietre più popolari materiali da costruzione disponibili: con un ricco patrimonio, una bellezza pulita e semplice.

Portland Stone (quarried on the Isle of Portland, Dorset) is a type of limestone which formed slowly over the last 150 million years or so as tiny grains of sediment grew and compacted. It is very similar to Bath Stone, but has a subtly unique texture, grain and colour. Portland Stone is actually a family of closely related limestone variants, each owing their subtle unique qualities to the age of the stone. While the different variants have these distinct qualities, they all share some common characteristics too: They are all off-white to light grey, notably uniform in colour but interspersed with small dark specks, or 'grain'.

Used since Roman times, Portland Stone has been a hugely popular building material particularly where the desired architectural effect was one of grandeur. It has notably been used in political, financial, regal, civil and commemorative architecture. In fact a staggering number of hugely significant buildings—particularly in London—were constructed with Portland Stone between the mid-1700's and the 1930's. To this day, Portland Stone remains one of the most popular stone building materials available; with rich heritage, clean and simple beauty.
